

PRODUCT DATA SHEET

COTTON PICKER SPINDLE GREASE

DESCRIPTION

Cotton Picker Spindle Grease is a special purpose lithium extreme pressure (EP) grease with anti-wear performance designed to provide excellent performance in high speed spindles of cotton picker machines. It has outstanding rust and corrosion protection and excellent resistance to water washout.

It is manufactured with a lithium hydroxy-stearate soap base with selected low viscosity mineral oils combined with rust, oxidation and corrosion inhibitors and very effective lead free extreme pressure additives.

Appearance	Green, Semi fluid
Worked Penetration	415mm ASTM D217
Oil Viscosity	32 cSt@40°C

APPLICATION

This grease utilises special low viscosity oils to provide superior protection for the high speed spindles, picker bars and chassis bearings on cotton pickers. It is ideal for pumping through the centralised automatic lubrication systems.

Cotton Picker Spindle Grease eliminates spindle seizure or freeze-up, performs well at startup and is recommended for use where John Deere JDN 305, JDN 360 or International Harvester IH B-27 specifications are listed.

STANDARDS

NLGI Grade - No 00

CONTAINER SIZES

850kg IBC, 175kg

Issue Date 1/9/2019
