

PRODUCT DATA SHEET

LOG END SEALER CLEAR

DESCRIPTION

Prolube Log End Sealer Clear is a semi clear water based wax emulsion designed to prevent cracking in logs and in sawn timber. This controls the moisture loss from the timber by sealing the end grain and preventing uneven drying. The seal created also assists to prevent insect attack.

APPLICATION

Prolube Log End Sealer Clear is applied to timber by brush or spray at a rate of approximately one litre per 4 m², equivalent to a heavy coat of paint.

The shelf life of this product is 12 months, the drum should be agitated before use.

All traces of Log End Sealer should be removed before painting.

Storage at temperatures less than 5°C may cause the emulsion to break, resulting in separation of the wax and the water components.

CONTAINER SIZES

205 Litres, 20 Litres
