

PRODUCT DATA SHEET

SPRAY ON FLUID

A background image showing a close-up of industrial machinery, possibly a pump or engine component, with various pipes, valves, and a yellow hose. The image is slightly blurred and has a light blue tint.

DESCRIPTION

Spray on Fluid is a combination of vegetable and paraffinic base stocks blended with non-foaming release agents that will not emulsify with water. This product is a cost-effective alternative to using diesel and is also a more environmentally friendly product than diesel.

APPLICATION

Spray on Fluid is ideal for applying to surfaces that come in contact with concrete. The protective layer creates a barrier to prevent adhesion of concrete to the surface and protects painted surfaces from premature loss of colour.

Apply with a spray or brush to obtain an even coating.

Breathing apparatus should be used when applying by spray method. Please refer to the Safety Data Sheet for detailed information regarding use.

CONTAINER SIZES

205 Litres, 20 Litres

Issue Date 31/3/2020

Proven Protection. Powerful Performance.
