

PRODUCT DATA SHEET

AVIATION SMOKE OIL

DESCRIPTION

Prolube Aviation Smoke Oil is a pure paraffinic mineral oil specially processed to ensure full compliance with purity standards for use as a smoke generator in aviation aerobatics and formation displays. Aviation Smoke oil has a low viscosity to assist in vaporisation and also has excellent low temperature characteristics. It is suitable to mix with varying colours as required by the event.

APPLICATION

Prolube Aviation Smoke Oil is suitable for use in both piston and turbine powered aircraft. Aviation Smoke Oil produces a stable voluminous white plume which facilitates the safer performances by providing good visibility of other aircraft and trajectories. Approved colour may be added according to the manufacturer's specifications.
